

Sprint Review — [Sprint 1]

Sprint goals

Build core API foundation (Sandwiches + Orders + basic flow)

User Stories Included

- Manage the sandwich menu
- Create customer orders
- View menu items
- Basic API setup

Demos

Demo	Feedback
Create new sandwich (POST /sandwiches/)	Worked correctly, data stored in the database successfully
View all sandwiches (GET /sandwiches/)	Returned correct data, response format was clean
Get sandwich by ID (GET /sandwiches/{id})	Correctly handled valid and invalid IDs (404 works)
Create order (POST /orders/)	Successfully created an order with a timestamp
View all orders (GET /orders/)	Data retrieval worked as expected
API testing via Swagger (/docs)	Easy to test endpoints, UI helped with debugging

Complete tasks

- Created core models: Sandwich and Order - Done
- Implemented CRUD endpoints for sandwiches - Done
- Implemented create and read endpoints for orders - Done
- Connected FastAPI to MySQL database using SQLAlchemy - Done
- Tested all endpoints using Swagger (/docs) - Done
- Verified correct response codes (200, 404, 422) - Done

Upcoming

- Implement full CRUD for orders (PUT, DELETE)
- Add resources (inventory) endpoints
- Add recipes to link sandwiches and resources
- Implement order_details to connect orders and sandwiches
- Add unit testing using pytest
- Improve validation and error handling
